AMENDMENTS TO THE CLAIMS:

Please cancel Claims 3 and 11 through 68 without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 1, 2, 4 through 6, and 8 through 10 as follows:

1. (Currently Amended) An information processing apparatus for submitting document information including ~~an image~~ a plurality of images via a network, comprising:

an image input ~~means~~ unit;

a schedule storage ~~means for storing~~ unit adapted to store input schedule information of said image input ~~means~~ unit;

an image storage ~~means for storing~~ unit adapted to store an image obtained in accordance with the schedule information;

a designation unit for designating an image among the plurality of images in the document information to be changed by an image newly stored in said image storage unit; and

a document creation ~~means for creating~~ unit adapted to create new document information by substituting ~~an~~ the designated image in the document information by the image stored in said image storage ~~means~~ unit.

2. (Currently Amended) The apparatus according to claim 1, further comprising means for transferring the document information created by said document creation ~~means~~ unit to a network server.

- 2 -

3. (Cancelled)

4. (Currently Amended)   The apparatus according to claim [[3]] 1, further comprising display control means for displaying the changed image in a different pattern.

5. (Currently Amended)   The apparatus according to claim [[3]] 1, further comprising display control means for, when [[an]] the image among the plurality of images in the document information is selected designated, displaying that image in a pattern different from other images.

6. (Currently Amended)   The apparatus according to claim 1, further comprising means for storing an image prepared in advance, and substituting an image among the plurality of images in the document information, which is not changed, by the image prepared in advance.

7. (Original)   The apparatus according to claim 1, wherein the document information is HTML document information.

8. (Currently Amended)   The apparatus according to claim 1, wherein the input schedule includes an image sensing position and a time.

9. (Currently Amended)   A method of controlling an information processing apparatus for submitting document information including an image a plurality of images via a network, comprising:

the step of storing input schedule information of predetermined image input means;

the step of storing an image obtained in accordance with the schedule information;

the step of designing an image among the plurality of images in the document information to be changed by an image newly stored in said image storage step; and

the step of creating new document information by substituting ~~an~~ the designated image in the document information by the image stored in said image storage ~~means~~ step.

10. (Currently Amended) A storage medium that stores a computer program code for an information processing apparatus which comprises image input means and submits document information including ~~an image~~ a plurality of images via a network, ~~storing~~ the code comprising:

a program code of the step of storing input schedule information of predetermined image input means;

a program code of the step of storing an image obtained in accordance with the schedule information;

a program code of the step of designating an image among the plurality of images in the document information to be changed by an image newly stored in said image storage step; and

a program code of the step of creating new document information by substituting ~~an~~ the designated image in the document information by the image stored in said image storage ~~means~~ step.

11 - 68. (Cancelled)
